Quelques rappels sur les sites [4] et [6] dans la pseudo maille Hexagonale Compacte

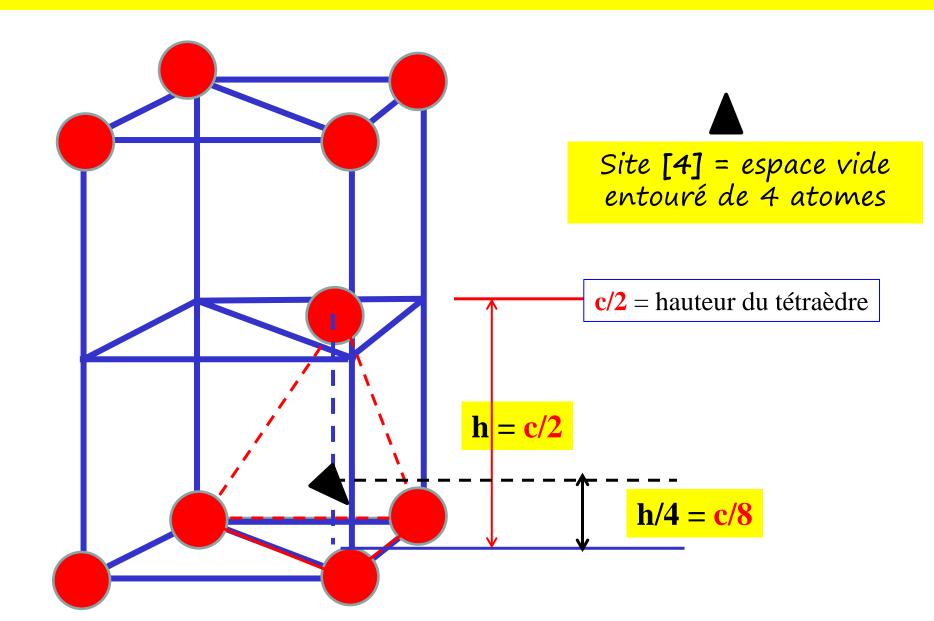

Pr. A. SAMDI
Faculté des Sciences Aïn chock
Université Hassan II
Casablanca

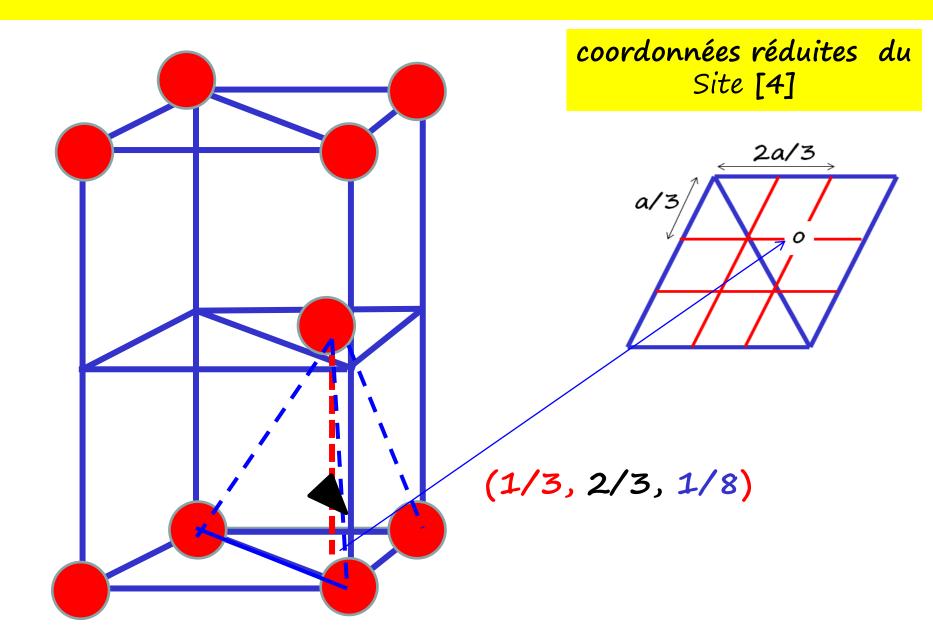

Les sites tétraédriques [4] au centre d'un tétraèdre

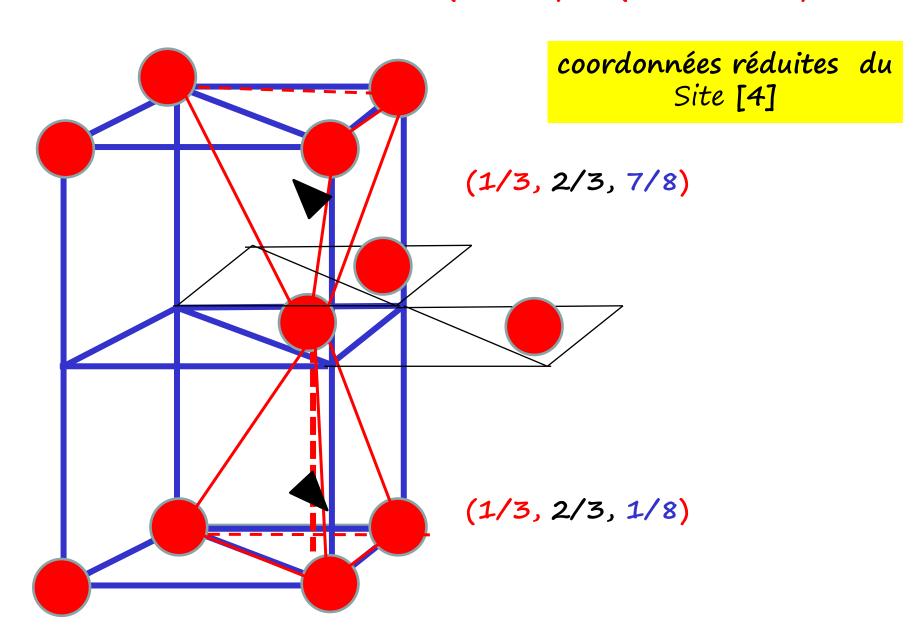

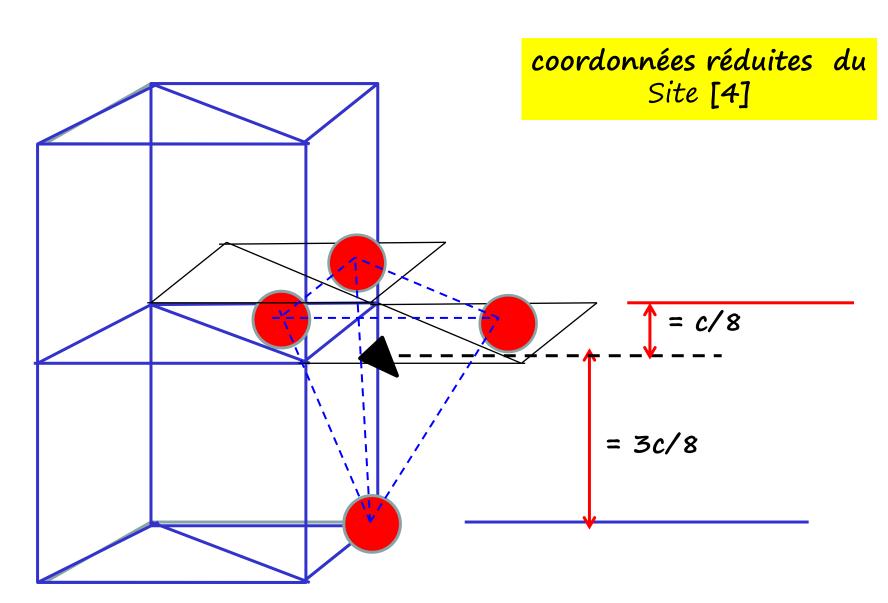

Sa projection se trouve au centre du triangle formé par les atomes formant la base

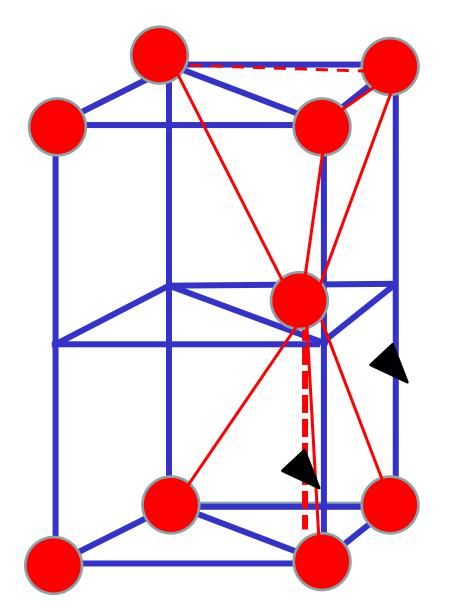

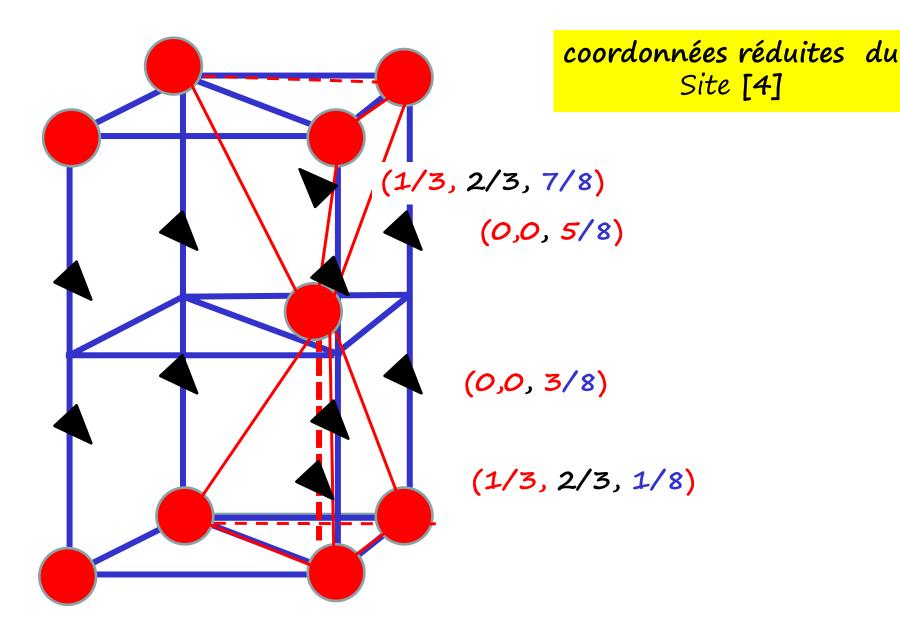

Coord. réd. des atomes (0,0,0) (1/3,2/3,½)

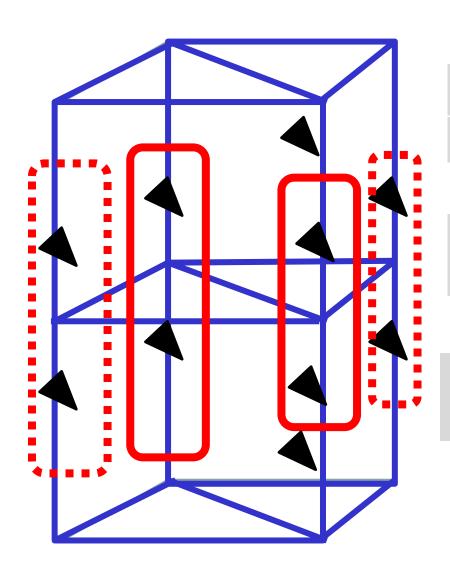

coordonnées réduites du Site [4]

(1/3, 2/3, 1/8)

Nbre de coordonnées réduites des Sites [4]

4 Sites [4] sur axe à 120°C

Ils appartiennent à 3 pseudo mailles

Donc $4 \times 1/3 = 4/3$ sites

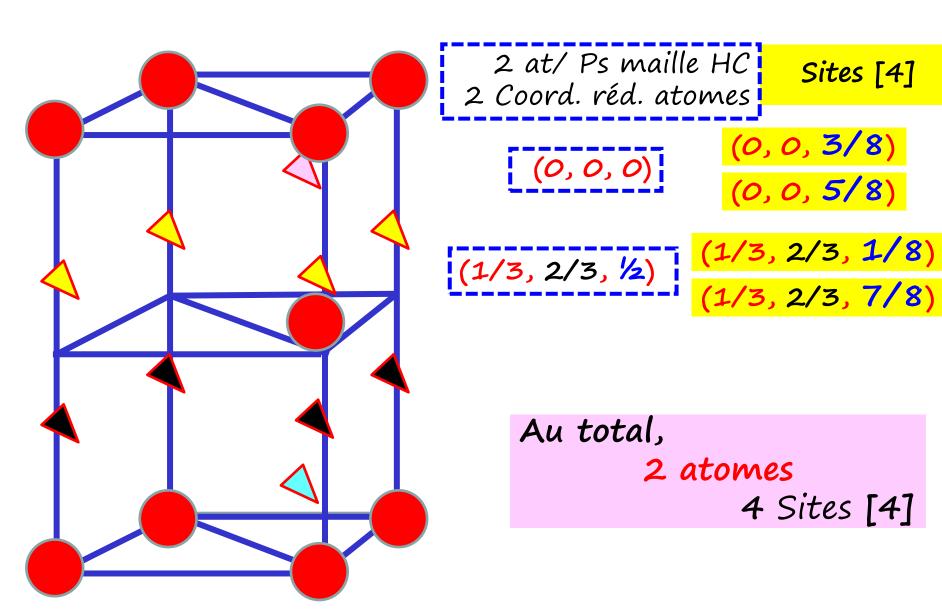

4 Sites [4] sur axe à 60°C

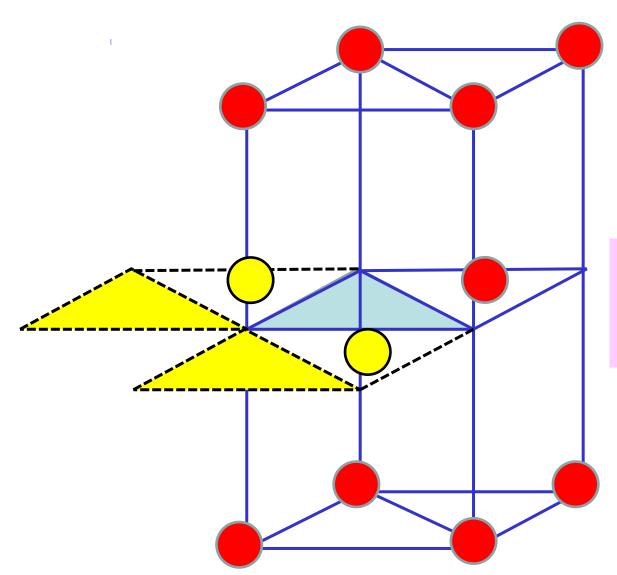

Ils appartiennent à 6 pseudo mailles Donc $4 \times 1/6 = 4/6$ sites

2 Sites [4] internes
Ils appartiennent totalement à la
pseudo maille
Donc 2 x 1 = 2 sites

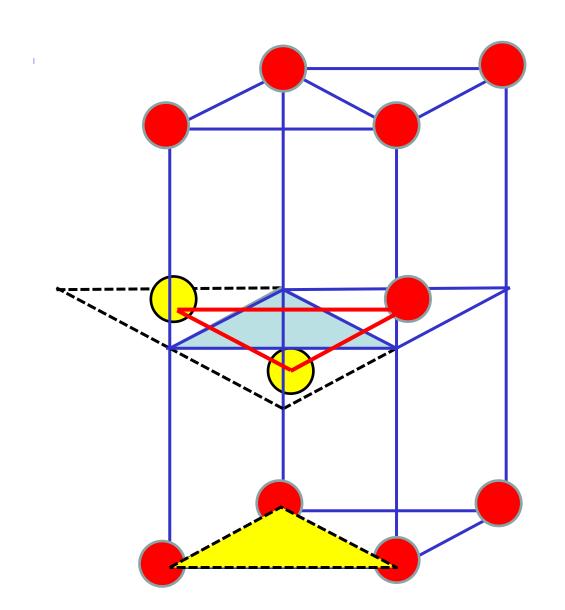

Au total, 4/3 + 4/6 + 2 = 4 Sites [4]

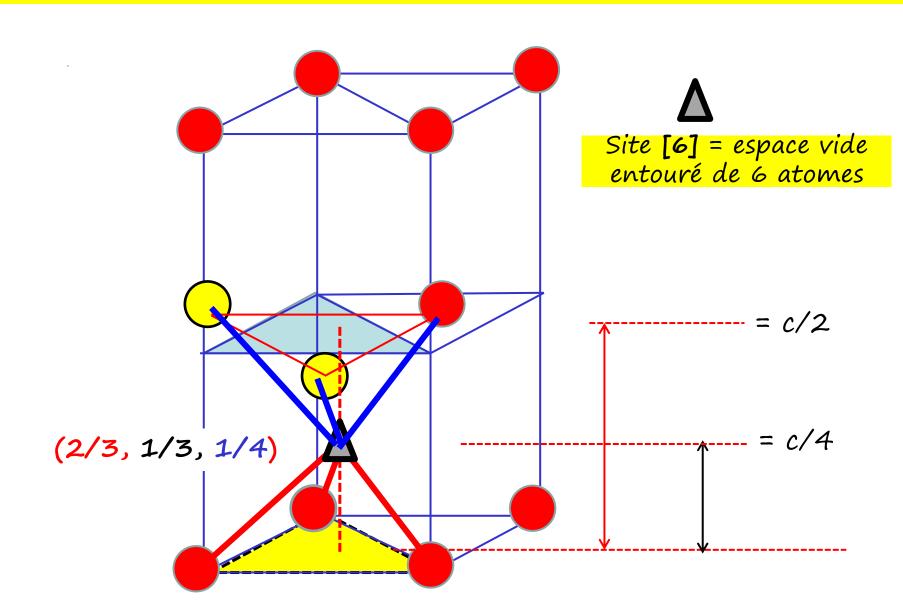

pseudo maille hexagonale

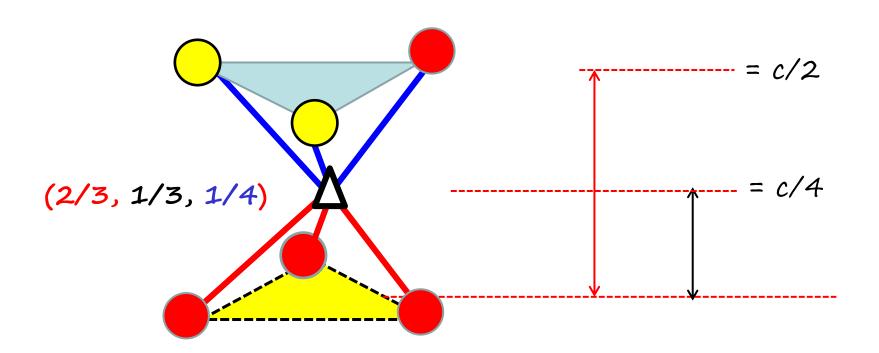

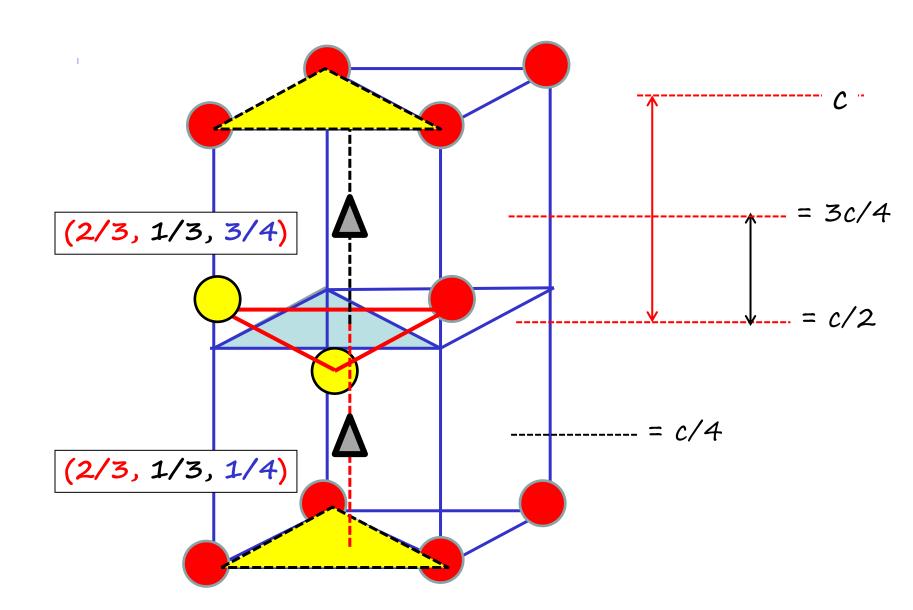

On considère aussi les atomes (plan Z=1/2) dans les pseudo mailles voisines

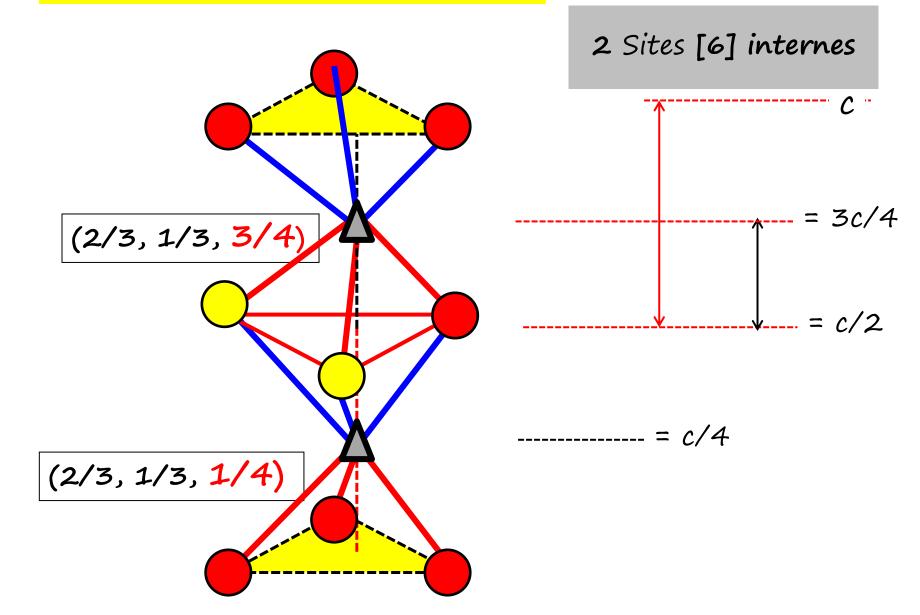

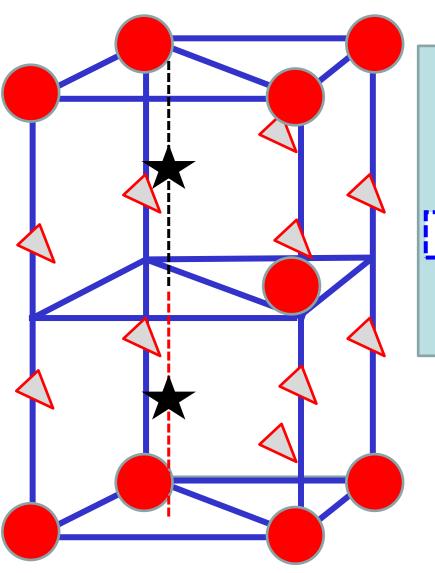

pseudo maille hexagonale: Atomes + Sites

atomes

(0, 0, 0)

(1/3, 2/3, ½)

Au total, 2 atomes Sites [4]

(0,0,3/8)

(0, 0, 5/8)

(1/3, 2/3, 1/8)

(1/3, 2/3, 7/8)

4 Sites [4]

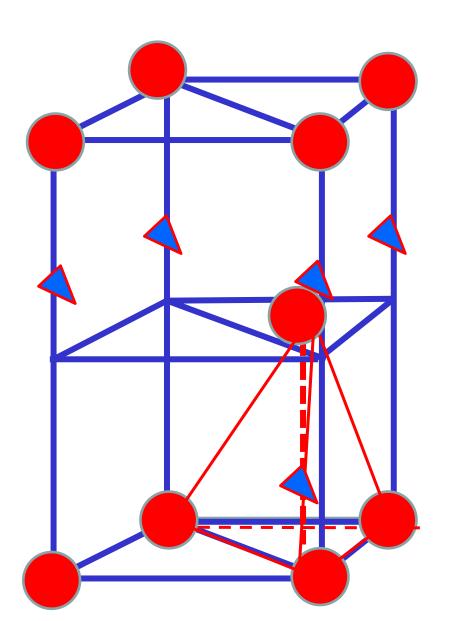

Sites [6]

(2/3, 1/3, 1/4)

(2/3, 1/3, 3/4)

2 Sites [6]

Structure ZnS würtzite = occupation de la moitié des Site [4] de l'HC

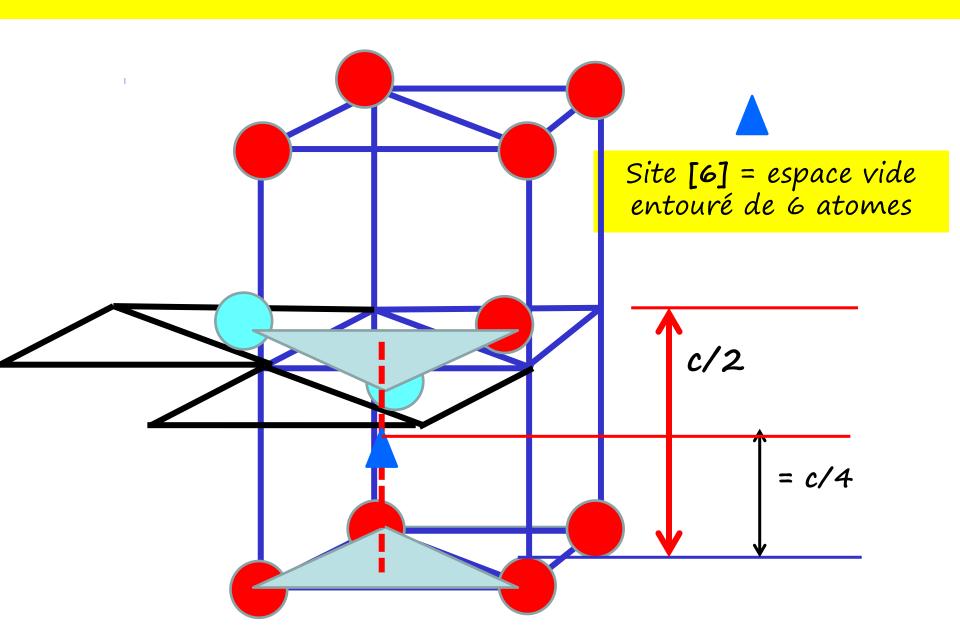

Coord. réd. des atomes S^{2-} (0, 0, 0) (1/3, 2/3, ½)

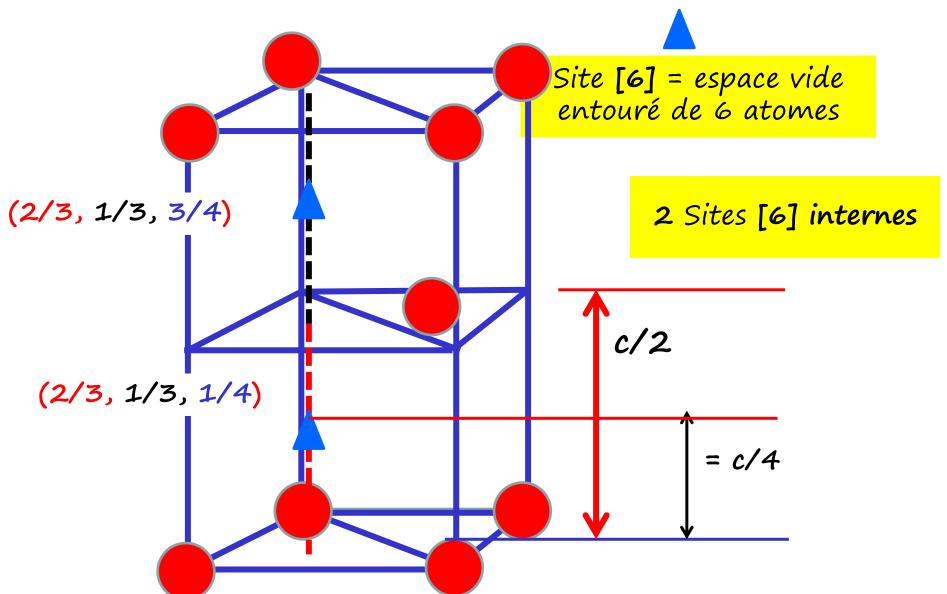

Coord. réd. des atomes Zn^{2+} Il occupera un plan de sites /2

(0,0,5/8)

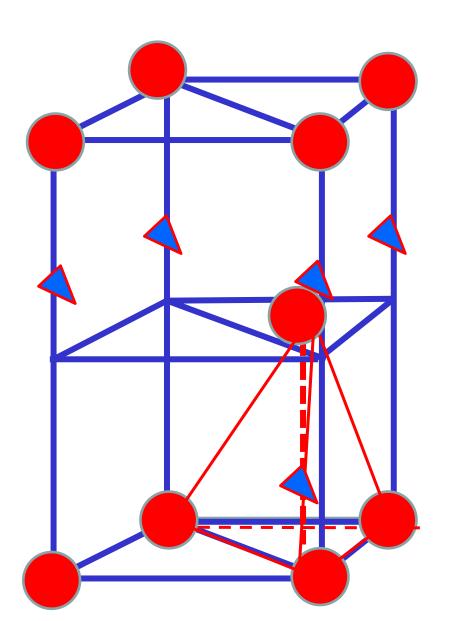

(1/3, 2/3, 1/8)

Coord. réd. des atomes (0, 0, 0) $(1/3, 2/3, \frac{1}{2})$

Structure ZnS würtzite = occupation de la moitié des Site [4] de l'HC

Coord. réd. des atomes S^{2-} (0, 0, 0) (1/3, 2/3, ½)

Coord. réd. des atomes Zn^{2+} Il occupera un plan de sites /2

(0,0,5/8)

(1/3, 2/3, 1/8)
